RECENT WORK/PROJECTS

To-Do List App
- Created web-based to-do list application
- Takes input from user and dynamically generates list items.
- HTML5 used for basic page structure, CSS3 for styling, while JavaScript is used for program logic and rendering HTML elements to page.

Artist Landing Page
- Created landing page/bio build for music artist.
- Clean/simple design, as specified by client. Relevant information and links are easily accessible.
- Basic page structure written in HTML5. Styling is written in CSS3, making use of the Bootstrap 5 library. JavaScript used to render HTML elements to DOM.

Seconds-Since-Birth Calculator
- Created web-based age calculator with a twist: unit of measurement is seconds
- Application accepts 3 user inputs (name, birth month, and birth year) and prints a custom greeting to the user, as well as approximate calculation of seconds since birth.
- Page structure written in HTML5, styles hand-coded in CSS3, and program logic written in JavaScript.
